

Give Horns To Your AC

Like the *Ides of March*, IoT is descending upon us. Today, everyone is hooked to his mobile phone. Why not utilize that to our advantage?

Current ACs are managed by a remote control that has capabilities defined just for the AC. In addition to on/off function, you can set the desired temperature, alter the air flow, operate the flap and so on.

A smartphone can execute all these functions and more. A smartphone can also collect usage data, and monitor the performance of the AC.

The smartphone can give you exact status of the AC, the temperature inside the room, and a whole slew of additional data such as running time, power consumption, etc. The AC can be controlled from anywhere through an Internet connection. Using NFC, the AC can

also be controlled without WiFi. You can set the room ambience you need from anywhere. Forgotten to switch your AC off? No problem. Switch it off from your car. Worried about your EB bills? Analyze the power consumption pattern of your AC and call for servicing or repair.

Welcome To SMACC

Installed as an add-on to your existing controller board, Soslaey's Smart AC Controller (SMACC) introduces smartness and full communication capabilities to the AC. Using WiFi or Bluetooth, SMACC acts as a communication bridge between the smartphone and your AC. SMACC reads all data and controls the AC through your current electronics board. **It just adds a lot of smartness.**

Advantages

To The User

- ✓ User friendly app on smartphone for easy use.
- ✓ GUI based intuitive controls.
- ✓ Alerts and help for decision making.
- ✓ Predictive analysis for servicing requirements.
- ✓ Data analysis of power consumption.
- ✓ Suggestions for defined electricity spend.
- ✓ Monitor, control and update from any part of the globe.

To The Manufacturer

- ✓ Low costs and quick ROI.
- ✓ Enhanced customer happiness and satisfaction.
- ✓ Enhanced sales and market share.
- ✓ Complete knowledge of each installation.
- ✓ Remote inspection for quick trouble shooting.
- ✓ Proactive troubleshooting and servicing of ACs.
- ✓ Cloud based data analysis for performance and quality evaluation.
- ✓ Cloud based analysis of sales and installation for production and distribution optimization.
